Milano, 19 mag. (Adnkronos) – Sono stati presentati i risultati del progetto 'Sidera^B', una piattaforma tecnologica di servizi integrata con una serie di strumenti per l'erogazione di attività motorio-cognitive di riabilitazione (applicazioni multimediali e video game), alcuni indossabili, per il monitoraggio dell'attività fisica, ma anche del sonno.

**I nuovi rivoluzionari apparecchi acustici che stanno spopolando in Italia**

Il progetto 'Sidera^B' (sistema integrato domiciliare e riabilitazione assistita al benessere), è stato finanziato da Regione Lombardia (con risorse per festr 2014-2020 -asse 1), con un partenariato di elevato livello scientifico e tecnologico, costituito da centri di ricerca (Ircs fondazione don Carlo Gnocchi – onlus, università degli studi di Milano -Bicocca, Liuc – università Cattaneo e Politecnico di Milano), aziende produttrici (Ab medica spa, TenactaGroup spa, Amikosrl, Grifo Multimedia srl), con la collaborazione di [fondazione Politecnico](#). Su 6,3 milioni di euro di investimento complessivo del progetto, Regione Lombardia ha finanziato 3,3 milioni di euro.

"Questi progetti – ha dichiarato Fabrizio Sala, assessore a istruzione, università, ricerca e innovazione di Regione Lombardia – valorizzano la ricerca fatta all'interno delle piccole e medie imprese in collaborazione con università, centri di ricerca e grandi imprese. Noi vogliamo premiare le eccellenze e i contenuti più innovativi e negli accordi per la ricerca abbiamo investito quasi 100 milioni che hanno permesso di attivare investimenti complessivi per oltre 185 milioni. È fondamentale mettere in rete le competenze per innovare nella direzione giusta, quella del futuro".
